UI-focused Product Designer working across digital products and web experiences. I design interfaces and user flows from early requirements to usable, implementation-ready experiences, combining strong visual design with product thinking and front-end knowledge. I use AI-assisted workflows throughout my process to explore ideas, solve UX problems, and collaborate more effectively with technical teams, with a growing focus on AI-native products.

Work Experience

UI/UX Designer

Operater.io

Jan 2026 -

- Designed end-to-end product interfaces and user flows from scratch, working closely with the Product Manager to translate product requirements and technical constraints into clear UX solutions.
- Iterated on flows and interfaces through product feedback and technical discussions, taking core experiences from early concepts to beta-ready designs.
- Established the product's visual direction, reusable interface patterns, and component foundations in the absence of an existing design system.

Co-Founder

v1be.io

July 2026 -

- Helped shape early product direction, positioning, and digital presence as part of the founding team.
- Designed and launched v1be's product and studio websites from scratch, translating an evolving product vision into clear, public-facing experiences for early validation.
- Currently shaping the core product experience, interface patterns, and visual direction as the product evolves from early concept toward a usable product

Freelance Web Designer & Developer

(July 2025 - Present)

Web Designer&Developer (E-commerce)

Rook AI July 2025 - Oct 2025

MyNessa Media Jan 2026 - Apr 2026

- Design and develop responsive websites for startup and client projects based on e-commerce
